1)

Code	Our prediction	What Python shows	Same?
`print ("Hello, Data Scientist Engineering")`	`Hello, Data Scientist Engineering`		yes
`2+3*4`	14		yes
`7/2`	3.5		yes
`7//2`	3		yes
`7%2`	1		yes
`"Hi"*3`	HiHiHi		yes
`"5"+"5"`	10	'55'	no
`5+5`	10		yes
`type (3.5)`	error	float	no
`type ("3.5")`	3.5	str	no

2)

a. It printed "20", because the code add 1 to the variable "age"
b. Its a syntax error, because the variable age needs to be a number and ("") is for text.
